Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Claims 1-8 remain for examination.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, it is not clear what is the difference between the partially connected communication network and the communication means. Each can be any portion of a communication paths complex.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Khan et al, U.S. Patent Application Publication No. 2002/0120915, cited in the previous office action.

The rejection is respectfully maintained for the reason set forth in the previous office action incorporated herein by reference.

6. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Busa et al, U.S. Patent Application Publication No. 2001/0039610.

Busa et al teaches the invention as claimed in claim 1 including a processor comprising:

- (a) a plurality of functional units (2-5; par. 35),
- (b) a distributed register file (Reg 1s and Reg 2s; par. 95, line 3) accessible by the functional units,
- (c) a partially connected communication network (path from registers to functional units) for coupling the functional units and selected parts of the distributed register file, communication means (path from the functional units to registers) coupling the functional units and the distributed register file, and

further teaches as in claims 2 and 3,

- (e) the communication means comprising a multiplexer and a bus (fig. 1) – claim 2, and
- (f) the communication means having higher latency than the partial communication network (longer path) – claim 3.

7. Applicant's arguments filed November 15, 2006 have been fully considered but they are not persuasive.

Applicant argued that the communication in the reference takes place in the wrong direction that is different from the direction described in the specification.

Applicant is reminded that descriptions in the specification do not get imported into claims and the claims do not recite the direction of communication.

Applicant also argued that the reference do not teach a higher latency communication means, however, the path going through a multiplexer is inherently of a higher latency.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth S KIM whose telephone number is (571) 272-3627. The examiner can normally be reached on M-F (8:30-17:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Rinehart can be reached on (571) 272-3632. The fax phone numbers for the organization where this application or proceeding is assigned are (571) 273-8300 for all communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-2100.
